

ABSTRACT

The invention provides a pharmaceutical product in which a tranilast-containing pharmaceutical preparation is contained in a packaging container through which the content can be visually observed
5 and which can inhibit photodegradation of tranilast.

The invention provides a pharmaceutical product in which a pharmaceutical preparation containing tranilast and/or a salt thereof is contained in a packaging container through which the content can be visually observed and which is provided with a shading means
10 for blocking light in the wavelength range from 350 nm to 450 nm.
